PROFILE

Software Engineer with 5+ years of professional experience in game and application development. Experienced in building complex, data-driven systems, working with databases and analytics integrations, and collaborating across multidisciplinary teams. Strong analytical and problem-solving background with experience in SQL, Python, and MySQL, with an interest in applying this technical foundation to broader analytical, planning, and business-focused challenges.

CORE COMPETENCIES

Software & Game Development • System Design & Architecture • Data Analysis & Interpretation • Data-Driven Decision Making • Analytical Problem Solving • KPI & Performance Analysis • Technical Project Ownership • Cross-Functional Collaboration • Process & Continuous Improvement

WORK EXPERIENCE

Senior Software Engineer

Nexus Dev Studio, Leeds, England (Remote) | January 2025 – Present

- Lead development of multiple modules within **Nexus Arcade**, a multiplayer mixed-reality product, owning features from technical design and implementation through testing, optimization, and release.
- Monitor released-product **KPIs, growth, and performance metrics** across Meta dashboard, using product data and user trends to identify issues and support ongoing improvements.
- Develop and maintain complex real-time applications using **Unity and C#**, working across multiplayer systems, VR/MR, data-driven features, platform integrations, and performance optimization while collaborating with cross-functional teams.

Software Engineer

Crosshair Technology, Lahore, Pakistan | June 2023 – November 2024

- Developed an **Inventory & Order Management application** using C#, .NET, and SQL, implementing product and supplier management, inventory tracking, purchase/order workflows, and reporting features backed by a relational database.
- Co-developed **Animalia**, a multiplayer CCG application, implementing gameplay systems, networking, and scalable data-driven architecture for managing structured game content.
- Developed **Maze**, a 3D simulation prototype featuring state-driven AI, dynamic system behavior, and modular application architecture.

Software Engineer

GeniTeam Solutions, Lahore, Pakistan | January 2022 – May 2023

- Contributed to **StoreFlow**, a retail operations and inventory management application built using **C#/.NET and SQL Server**, developing modules for product/SKU management, inventory tracking, stock movement, sales records, and store-level reporting.
- Developed data workflows for **StoreFlow** to import and validate operational data from **Excel**, persist structured records in **SQL Server**, and generate exportable inventory and sales reports for analysis and reconciliation.
- Integrated **Firebase, authentication, databases, analytics, and third-party services** into *Heroes and Villains*, supporting user-data management, event tracking, and application performance monitoring.
- Developed the prototype of **Lost Soul District**, a multiplayer PC shooter, implementing core gameplay and networking systems supporting 1v1, 3v3, and 5v5 team-based modes.
- Designed and implemented advanced **AI systems for TWET**, a multiplayer turn-based strategy game, supporting dynamic human and AI team compositions including 2v2 gameplay.

EDUCATION

Bachelor of Science (Computer Science)

National University of Computer and Emerging Sciences (FAST-NUCES) | August 2017 – December 2020

SKILLS

Software Development: C#, .NET, Unity, C++, JavaScript, Object-Oriented Programming, Database Integration, API & Third-Party Integrations

Tools & Platforms: Firebase, Git/GitHub, AWS, PlayFab, Visual Studio, Google Play Console, App Store Connect, Meta Developer Platform

Data & Analytics: SQL, MySQL, Microsoft Excel, Python, Firebase Analytics, KPI & Performance Analysis
